

Data Migration Workshop

SPECIALIZATION

**Data
Analytics**

Google Cloud

Migrating your data to the Cloud can seem like an unknown path. Where does the journey start? How do you get there? And, most importantly, what can you expect to gain at the end of it? Will it deliver the full value that Google Cloud can bring?

As is often the case, the first step down a path is often the hardest. At Appsbroker, we recognise this and have developed a guided process to help you take the first crucial step. During this process, we'll provide definitions to key areas to help you start off on the right foot.

What to Expect

The following topics, covered in our one and a half hour workshop, will enable the correct approach, the required team, the migration path(s), and also the rough order of investment required to support the migration.

Data Migration Workshop Topics

1

The Migration Vision

- Success Criteria
- Timeframes
- Key Milestones

2

The Project Scope

- Components to Migrate
- Functional and Non-Functional Requirements
- Migration Patterns

3

Cloud Maturity

4

Ways of Working

- Process
- Team
- Approach

This information will allow you to build a business case around migrating to the Cloud, as well as understand the process involved and the benefits that a cloud migration will bring.
