

Secure your Cloud environment with a ZERO trust security model from Appsbroker.

Safeguard against potential threats and provide customers with proof that you value their privacy and data security above all else. Add zero trust security measures into your cloud business strategy and feel the benefits whilst accelerating the use of Google Cloud.

Need to deploy workloads fast? Chill.

Producing a Target Start Architectural design

Project Sub Zero deploys first workloads in **weeks**, not months, **significantly reducing client timelines**

Delivering an Industry best practice secure foundation to **reduce the threat** vector and opportunity for both internal and external compromise of cloud solutions

Working closely with your Cloud Delivery teams to coach to **independence**

More about Project SUB ZERO

An exclusive Appsbroker collaboration with Google Cloud that delivers Secure Landing Zones at scale for existing Google Cloud customers or those with no Cloud footprint. Delivered via Infrastructure as Code; providing the code base to deliver further secure services with rapid secure deployment. Sub Zero meets Google's Cloud Security Foundation Blueprint (SFBP) in a safe and functional environment to deploy customer workloads rapidly.

Google Cloud relies on BeyondCorp, a zero trust system designed to move beyond the idea of a privileged corporate network.

Deploy faster than a traditional VPN system, for rapid onboarding and spin up new device access quickly to bypass failing hardware.

Give web apps custom access controls based on your chosen factors to improve security and lower risk.

“Google Cloud presents the most comprehensive opportunity to make Zero Trust Security a reality for its customers and pushes the boundaries of how Cloud security is perceived.”

- Mike Smith, Chief Information Security Officer at Appsbroker

De-risk and do more

Fortifying your Security operation

Prevent unauthorised access to cloud applications and underlying infrastructure through sophisticated attacks aimed at gaining control over systems or data.

Provides an opinionated best practice driven approach to your Google Cloud Secure foundation deployment.

Meets a number of compliance regimes requirements.
